

Ethical Policy

At Granted we are committed to reducing the energy we use through our business activity, wherever possible.

We minimise waste and promote reusing and recycling and try to integrate good practice into all our daily activities.

Where possible we use suppliers who also ascribe to these aims, our printed materials are 100% recycled from certified sources and the design element produced using 100% renewable energy.

Our offices are easily accessible by public transport and we regularly use these services to visit clients.

We promote energy saving awareness to our clients/suppliers and target the most oil dependent to make significant reductions in carbon.

We are working to create renewable energy and sustainable construction training centres, which will contribute to carbon reduction targets.
